EDUCATION

Western Mindanao State University <i>Bachelor of Science in Information Technology (BSIT)</i>	05/2021 – 05/2025 Zamboanga City, Philippines
Amable M Aguiluz <i>Technical Vocational Livelihood - Information Communication Technology</i>	01/2019 – 01/2021 Zamboanga City, Philippines

PROFESSIONAL EXPERIENCE

Local Government Unit of Zamboanga City <i>Programmer</i>	08/2025 Zamboanga City, Philippines
• Developed and implemented internal web-based systems to support government office operations and improve service efficiency. • Built and maintained a facial recognition attendance and identification system for the City Social Welfare Office. • Designed and improved document and process tracking workflows to enhance monitoring and accountability across departments. • Configured and maintained Flask-based web applications, including authentication and user management features. • Assisted government staff with system deployment, troubleshooting, and user training to ensure smooth adoption of new technologies. • Performed system updates, testing, and optimization to improve reliability and performance of deployed applications.	

SKILLS

• Laravel	• Python	• HTML/CSS/JS
• Face Recognition	• Artificial Intelligence	• Git Version Control
• SQL/Database Management	• Backend Development	• Frontend Development

PROJECTS

Procurement Workflow Study / System Planning

02/2026 – Present

Digital Procurement Process Mapping for LGU

A study and documentation of the procurement workflow used within the Local Government Unit. The project involves analyzing the full procurement lifecycle, from request initiation to approval and purchasing, with the goal of understanding the process and preparing it for potential digital system implementation.

Social Welfare Face Recognition System

03/2026 – 03/2026

Beneficiary Identity Verification System

A facial recognition system developed to assist the Social Welfare office in verifying beneficiary identities. The system captures facial images, generates facial embeddings, and compares them against stored profiles to ensure accurate identification during assistance distribution. It improves security, prevents duplicate registrations, and streamlines beneficiary verification.

BizBot - Capstone Project

2025

AI-Powered Business Process Automation Assistant

BizBot is an AI-powered assistant designed to automate routine business operations and support decision-making within organizations. The system integrates conversational interfaces with backend automation to help users manage tasks, retrieve information, and streamline workflows. BizBot aims to reduce manual workload, improve response times, and provide intelligent assistance for operational processes.

DentalCare

2023 – 2024

Dental Care Management and Appointment System

A web-based clinic management system designed to streamline dental practice operations. The platform manages patient records, appointment scheduling, treatment histories, and clinic administrative tasks through a centralized interface. The system improves appointment coordination, reduces manual record-keeping, and provides organized access to patient and treatment information.
